PWS Consumer Confidence Report (CCR) Preparation Questionnaire - 2006 Analytical Data

The upcoming deadline for Consumer Confidence Reports for public drinking water systems is July 1, 2007. Once again, Energy Laboratories, Inc. (ELI) will prepare these reports that will include your 2006 system information and analytical water quality data. There is no charge for this service as long as ELI performs all of your system's analytical requirements and all your system information is provided to the laboratory by April 28, 2007. Please fill out the questionnaire below to assist in organizing your information. Please mail this back as soon as possible or fax to 307.234.1639 attention Tabitha Edwards or Corinne Wagner. If you have any questions, you may contact us at our toll-free number, 888.235.0515 (local calls at 235.0515) for additional information regarding this service.

System Name & PWS #: _____

Does your system purchase water from another system? Please identify the name of the system you purchase water from: _____

Surface Water Systems: Name of source: _____

Ground Water Systems: Number of wells, springs or name of system your water is supplied from: _____

Name and **phone number** of person to be included in the CCR for your customers to contact with any questions they may have about the CCR.

Does your system have regularly scheduled board and/or water meetings? If so, please list below the **day, time and place** these meetings occur.

Please list below the dates for **ANY** detects (positive results) reported to EPA in **2006** regarding bacteria. It doesn't matter if the system resampled, all detects reported to EPA **MUST** be included in the report.

Does your system have any violations? If so, please explain (in detail) below. Please include a separate piece of paper or EPA document if needed.

If you are a SURFACE WATER SYSTEM, the CCR must contain, per EPA, the **highest TURBIDITY** observed for the year.

If your system has monitored for the Disinfectants and Disinfection Byproducts rule (D/DBP) and you would like those results included in your report, please provide the information. Please indicate if ELI performed these analyses. If so, we will retrieve the analytical data from our system.

Please include results for other drinking water analysis that your system tested for in 2006 that was **not** analyzed by ELI. Examples may be Asbestos, Dioxin, Total Coliform Bacteria, etc. These contaminants (if required) need to be included in your report.

If ELI has not prepared your system's CCR in the past, ELI will need a copy of your last CCR and may contact you for further information. An hourly fee may apply.
